报告题目: Cellular Biochemical Activity Architecture for Signal Sensing and Processing

报 告 人: Jin Zhang, Ph.D.

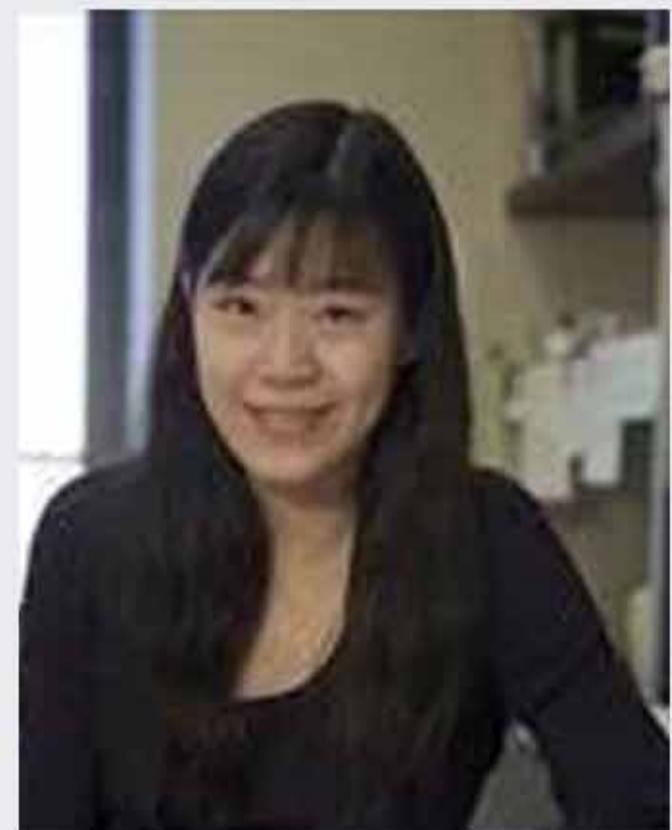

University of California, San Diego

时 间: 2019年3月27日 (周三) 上午10:30

地 点: 北京大学医学部生化楼三层中厅

主 持 人: 张 勇 研究员

报告人简介:

Intracellular signaling pathways in the brain play a central role in regulating neuronal activity and synaptic plasticity. We have developed a series of fluorescent biosensors to probe the spatiotemporal regulation of signaling molecules, such as protein kinases, phosphatases and second messengers, in living systems. In this talk, I will discuss some of the imaging technologies; and focus on cAMP/PKA and calcium signaling pathways and present studies where we combined genetically encoded fluorescent biosensors, superresolution imaging, targeted biochemical perturbations and mathematical modeling to probe the biochemical activity architecture of the cell.

Summary: We developed a new method of using bicarbonate-activatable and genetically targetable soluble adenylyl cyclase to control the location, kinetics and magnitude of the cAMP signal. Using this method in conjunction with fluorescence imaging and mechanistic modeling, we uncovered the activation of a resident pool of PKA holoenzyme in the nuclei of HEK-293 cells, modifying the existing dogma of nuclear cAMP-PKA signaling.
